- The inverter will initiate protection if the input voltage exceeds the MPPT operating voltage range.
- This refers to the load-side disruption time, to achieve this functionality Sigen Hybrid Inverter needs to be used together with Sigen Energy Gateway and Sigen Battery. Test conditions: In the open-circuit state of the power grid, the nominal power of the Sigen Hybrid Inverter is higher than the total power of the home loads.
- For all standards refer to the certificates category on the Sigenenergy website.

- The inverter will initiate protection if the input voltage exceeds the MPPT operating voltage range.
- PV1 independently connects to MPPT1, while PV2 and PV3 share MPPT2. Each MPPT input has a maximum power rating of 6.66 kW (for 10.0 TP2) and 8 kW (for 12.0 TP2). Any string power exceeding these limits will be clipped.
- Actual load starting performance depends on the load type and its characteristics; practical results may vary.
